

When your organization utilizes PeopleSoft for many of its key functions, but also wants to get to the cloud, the path may not be an entirely clear one. SaaS options aren't always immediately viable due to significant customizations or integrations. This is where ERPA steps in.

As an Amazon Web Services Advanced Consulting Partner with deep AWS infrastructure expertise, we have helped dozens of clients maximize and extend the life of their PeopleSoft deployment by migrating PeopleSoft to AWS. Migration to AWS provides the scalability and agility to handle peak workloads and the cost-effectiveness of an operational cost model, while also giving organizations a more SaaS-like experience for PeopleSoft.

## Cloud Migration Services

ERPA's Cloud Migration methodology is time-tested and proven. Every migration begins with a design framework and solution architecture, building in high-availability, scalability, and redundancy for seamless performance. Operational policies are developed, including those for backup and retention, testing, and automations. And ERPA's proprietary ActiveGenie™ is utilized to easily migrate data, ensuring that your organization is replicating only the most current data into its new cloud environment.

## Cloud Managed Services

After migration, entrust management of your new AWS infrastructure to ERPA. Our Managed Hosting Services reduce the lift on your IT team, allowing you to focus on strategic initiatives that impact your organization's bottom line while your infrastructure is managed by the certified AWS experts in our Center of Excellence. And, with our AWS Advanced Consulting Partner status, we've forged a deep relationship with direct access to AWS resources.

## Why Migrate PeopleSoft to AWS?

### Control Costs

With instances that are right-sized for your environment, a move to AWS results in predictable, controllable costs.

### Increase Performance

With the power of AWS infrastructure under your PeopleSoft deployment, resources are easily scalable to meet varying workload demands.

### Reduce Risk

Leverage AWS' geographic diversity to mitigate risk in the event of a disaster, natural or otherwise.

*At peak [registration] there were no issues whatsoever, no complaints and no concerns. Process run times increased dramatically, so that was a big win as well. So at the end, really big success for Daytona State College and a big win for our partnership with ERPA and AWS.*

*Marek Juracek, IT Director, Daytona State College*

## The ERPA Difference

### Experience

With more than 20 years of PeopleSoft expertise, ERPA is committed to continuing to support PeopleSoft deployments.

### Expertise

ERPA has achieved AWS Advanced Consulting Partner status and is proud to have certified AWS experts in our Center of Excellence.

### Innovation

Proprietary ActiveGenie™ data migration tool enables fast, secure migration of your most recent data, reducing lift on your technical teams.

### Values

We approach every client engagement through the lenses of our core values – Empathy, Responsibility, Passion, and Agility.
